

In Reception we have started the countdown of advent to Christmas. We have had lots of fun having Christmas Day in our home corner. We have also been singing Christmas songs in the outdoor area.

This week, in Year 6, the children have been concluding their Science topic about circulation. They worked hard to plan and carry out an investigation all about pulse. It was great fun to see our scientists at work whilst the test subjects were put through their paces completing different types of exercises. Luckily, they are a fit bunch so a minute of bouncing on a space hopper or completing burpees was not a problem. The children produced some excellent graphs to show their results and were able to explain why certain exercises increase pulse more than others.

In Year 3, we explored Advent and why it is a very important time for Christians. We talked about Advent Calendars helping us to count down and prepare for Christmas and as a class, we made an Act of Kindness Advent Calendar. One person in our class will 'open' our Advent Calendar each day and share an Act of Kindness that we can all do on the lead up to Christmas.
